

Electric steam generators: flexible heating and steam supply

Mobile solution for heating in pilot or laboratory facilities, microbreweries and test benches

10 to 90 kW electric steam generators for a directly available supply of steam at the push of a button requiring no extra installation work

- On-site steam supply at any location
- No primary energy transfer medium (oil or gas) required to generate steam
- Local carbon-neutral steam generation
- Simple to operate
- Directly available steam supply
- Compact footprint
- Plug-and-play solution

Electric steam generators: flexible heating and steam supply

Electric steam generators for industrial applications

Electric steam generators (200 kW) for flexible steam generation at a low cost of investment

- No primary energy transfer medium (oil or gas) required to generate steam
- No on-site emissions produced during steam generation (carbon neutral)
- Highly versatile operating modes
- Directly available steam supply
- Simple to operate
- Compact footprint
- Plug-and-play solution
